Authorization for this examiner's amendment was given in a telephone interview with Mr. Thomas Presson on 02/05/2009 and 02/11/2009.

3. The application has been amended as follows:

In the claims:

- a. Claim 19-24 have been cancelled.
- b. **Claim 1.** (Currently Amended) An information processing ~~apparatus~~ device comprising:

first extraction means for extracting, utilizing an extraction circuit, a reproduction time from stream data;

second extraction means for extracting, utilizing an extraction circuit, a an actual reception time of said stream data;

computation means for computing, utilizing a computation circuit, a difference between said reception time and said reproduction time; and

adjustment means for adjusting, utilizing an adjusting circuit, a reproduction time by:

calculating a number equal to a number of packets of stream data where for the difference, wherein the difference between said reception time and said reproduction time is a time equivalent to one clock cycle; and

utilizing the number to maintain less than one clock cycle maximum between an actual reception ~~timing~~ time and the reproduction time.

Claim 2. (Currently Amended) An information processing ~~apparatus~~ device comprising:

first extraction means for extracting, utilizing an extraction circuit, an interval of reproduction time between packets of stream data;

second extraction means for extracting, utilizing an extraction circuit, an interval of actual reception time between packets of said stream data;

computation means for computing, utilizing a computation circuit, a difference between said interval of reproduction time and said interval of reception time; and

adjustment means for adjusting, utilizing an adjusting circuit a reproduction time by:

calculating a number equal to a number of packets of stream data where for the difference, wherein the difference between said reception time and said reproduction time is a time equivalent to one clock cycle; and

utilizing the number to maintain less than one clock cycle maximum between an actual reception ~~timing~~ time and the reproduction time.

Claim 3. (Currently Amended) The information processing ~~apparatus~~ device according to claim 2, wherein said reproduction time is a time stamp.

Claim 4. (Currently Amended) The information processing ~~apparatus~~ device according to claim 2, further comprising:

first accumulation means for accumulating, utilizing an accumulation circuit, intervals of reproduction time between a predetermined number of consecutive packets of said stream data to obtain a first time; and

second accumulation means for accumulating intervals, utilizing an accumulation circuit, of reception time between said predetermined number of consecutive packets of said stream data to obtain a second time;

wherein said computation means computes a difference between said first time and said second time.

Claim 5. (Currently Amended) The information processing ~~apparatus~~ device according to claim 4, further comprising:

smoothing means for smoothing said difference between said first time and said second time.

Claim 6. (Currently Amended) The information processing ~~apparatus~~ device according to claim 5,

wherein said adjustment means adjusts reproduction time information by adding a time equivalent to one clock to said reproduction time or subtracting said time from said reproduction time for each number of packets with which said difference between said first time and said second time smoothed by said smoothing means provides a deviation equivalent to one clock.

Claim 7. (Currently Amended) An information processing method, stored in a memory and executed by a processor, the method comprising the steps of:

extracting a reproduction time from stream data;

extracting a an actual reception time of said stream data;

computing a difference between said reception time and said reproduction time; and

adjusting a reproduction time by:

calculating a number equal to a number of packets of stream data where for the difference, wherein the difference between said reception time and said reproduction time is a time equivalent to one clock cycle; and

utilizing the number to maintain less than one clock cycle maximum between an actual reception ~~time~~ time and the reproduction time.

Claim 8. (Currently Amended) An information processing method, stored in a memory and executed by a processor, the method comprising the steps of:

extracting an interval of reproduction time between packets of stream data;

extracting an interval of actual reception time between packets of said stream data;

computing a difference between said interval of reproduction time and said interval of reception time; and

adjusting a reproduction time by:

calculating a number equal to a number of packets of stream data
where for the difference, wherein the difference between said reception time and said reproduction time is a time equivalent to one clock cycle; and

utilizing the number to maintain less than one clock cycle maximum between an actual reception ~~timing~~ time and the reproduction time.

Claim 13. (Currently Amended) A computer-readable medium storing a computer program, the program, stored in a memory and executed by a processor, the program, comprising the steps of:

extracting a reproduction time from stream data;

extracting a an actual reception time of said stream data;

computing a difference between said reception time and said reproduction time; and

adjusting a reproduction time by:

calculating a number equal to a number of packets of stream data
where for the difference, wherein the difference between said reception time and said reproduction time is a time equivalent to one clock cycle; and

utilizing the number to maintain less than one clock cycle maximum between an actual reception ~~timing~~ time and the reproduction time.

Claim 14. (Currently Amended) A computer-readable medium storing a computer program, the program executed by an associated processing apparatus, the program comprising the steps of:

extracting an interval of reproduction time between packets of stream data;

extracting an interval of actual reception time between packets of said stream data;

computing a difference between said interval of reproduction time and said interval of reception time; and

adjusting a reproduction time by:

calculating a number equal to a number of packets of stream data where for the difference, wherein the difference between said reception time and said reproduction time is a time equivalent to one clock cycle; and

utilizing the number to maintain less than one clock cycle maximum between an actual reception ~~time~~ timing time and the reproduction time.
